

Project Report

On

HOTEL MANAGEMENT SYSTEM

Submitted To

Bharati Vidyapeeth Deemed University, Pune

In partial fulfillment of the requirement of

BACHELOR OF COMPUTER APPLICATION BCA III (SEM-V)

2023-24

Submitted By,

Miss. AARTI MALLAYYA SWAMI

Miss. ANUSHKA SANJAY YADAV

Under the Guidance of

DR. P.P.Patil

Through

THE DIRECTOR

BHARATI VIDYAPEETH DEEMED UNIVERSITY, PUNE

YASHWANTRAO MOHITE INSTITUTE OF MANAGEMENT, KARAD

(2023-24)

BHARATI VIDYAPEETH DEEMED UNIVERSITY, PUNE

YASHWANTRAO MOHITE INSTITUTE OF MANAGEMENT, KARAD

CERTIFICATE

This is to certify that the project entitled “**HOTEL MANAGEMENT SYSTEM**” submitted by **Miss. AARTI MALLAYYA SWAMI, Miss. ANUSHKA SANJAY YADAV**, in partial fulfillment of the requirement for award of **BACHELOR OF COMPUTER APPLICATIONS BCA III (SEM-V)** to **BHARATI VIDYAPEETH DEEMED UNIVERSITY, PUNE** has been completed satisfactorily by them for academic year 2023-2024.

To the best of my knowledge and belief, this is their original work and have not been submitted earlier, anywhere for any purpose.

Date: / /2023

Project Guide

(DR. P.P.Patil)

Declaration

To,

The Director,

Bharati Vidyapeeth University,Pune,

Yashwantrao Mohite Institute of Management,

Karad.

Respected Sir,

We undersigned hereby declare that the project report on " **HOTEL MANAGEMENT SYSTEM** " written and submitted under the guidance of **DR. P.P.Patil** is our original work. The finding in the case is based on the data collected by us while preparing this project we have not copied from any other project.

We understand that any such copying is liable to be punished in the way that centre university authority may be deem fit.

Date: / /2023

Place : Karad

Miss. AARTI MALLAYYA SWAMI

Miss. ANUSHKA SANJAY YADAV

ACKNOWLEDGEMENT

We extend our sincerest gratitude to respected teacher **DR. P. P. PATIL** under whose supervision and direction this project is undertaken. She is the guiding force and prime inspiration to lift us from the initialization state to the successful completion of the project.

Her friendly guidance and discussion over the complexities of a real time project have invoked a deep thought in us. she solved all our problems and queries related to the project. she made our project more meaningful.

Undertaking a project such as this places an equal if not greater pressure on friends and family members close to us. Our Chemistry made it more simpler to learn. So we are thanking to each other in our team.

Thanks to all those who helped us in one-way or other, and to all whose names go unmentioned.

Miss. AARTI MALLAYYA SWAMI

Miss. ANUSHKA SANJAY YADAV

1.0 INTRODUCTION

In my project “Hotel Management System” I have tried to show how the data/information in hotels is managed. This is just an overview of management in hotels. It manages and maintains the records of customers, rooms, employees and drivers in the hotel. The project is aimed to maintain the day-to-day state of admission/vacation of Residents, List of employees, room details etc. Main objective of this project is to provide a solution for hotels to manage most their work using computerized processes.

This software application will help admin to handle customer information, room allocation details, Payment details etc.

The rooms have different categories like single bed, double bed etc. so their charges and records will be maintained accordingly.

This software has been made in a user friendly interface, so that anyone can add, delete, update the entries and handle all the transactions easily. As a security I have provided Admin username and Password.

The project, Hotel Management System is a desktop-based application that allows the hotel manager to handle all hotel activities online. Interactive GUI and the ability to manage various rooms, employees, drivers and customers make this system very flexible and convenient. This application gives managers the power and flexibility to manage the entire system from a single online system. Hotel management project provides room booking, staff management and other necessary hotel management features. The system allows the manager to post available rooms in the system.

The application of the Hotel Management System bears the following functions to use by the Administrator:

- To add a new Room
- To add an Employee
- To add a new Customer
- To check room status
- To check all employees details
- To check all Customers details
- To update room status
- To update check status etc.

Administrative Modules

There are 2 modules I have included in this project :

1. **Admin** : Admin can add a new room and a new employee.
2. **Receptionist** : Receptionist can add a new customer and allocate rooms, can check all room details, customers details, employee details, search for a particular room etc.

1.1 OBJECTIVE

The objective of the Hotel Management System is to develop a project which maintains booking of rooms, providing drivers, etc. It is a windows based application to be implemented in Java

The Purpose of the whole process is to ease the daily or regular activities of the Hotel Management into an automatic computerized retrievable process. The daily activities includes the Room activities, Entering details of the new customer check in, To allocate a room as per the customer need and interest, Recording the checkout time and details, Releasing or Empty of room and to record the process in a computer system for future.

Main objective of this project is to provide a solution for hotels to manage most their work using computerized processes. This software application will help admin to handle customer information, room allocation details, Payment details etc.

- To keeping records of admission of customers.
- To facilities provided by hotels are fully utilized in an effective and efficient manner.

FEATURES

1. Hotel Room Bookings and Reservation
2. Front Desk Operations
3. Managing Guest Profile
4. User Privilege and security control
5. Keeping a tab on guest check-in check-out status
6. Maintenance of hotel rooms.
7. Providing a user friendly interface.

1.2 ADVANTAGES OF HOTEL MANAGEMENT SYSTEM

- It saves user time in searching a room.
- It saves organization resources and expenses.
- This system is effective and saves time and cost of users.
- It is less time consuming and provides maximum accuracy.

1.3 DRAWBACKS OF HOTEL MANAGEMENT SYSTEM

- The booking process usually requires a customer identity, which the system cannot detect.
- It requires a reliable internet connection

1.4 REQUIREMENT SPECIFICATION

User Requirements

There should be software which allocates rooms automatically and maintains records of customers.

System Requirements

There should be a database backup of the hotel management system. There should be a Java supported framework for the system. Operating system should be WindowsXP or a higher version of windows.

User Interface

The User interface required to be developed for the system should be user friendly and attractive.

There are two sets of java APIs for graphics programming:

AWT (Abstract Windowing Toolkit) and Swing.

- AWT API was introduced in JDK 1.0. Most of the AWT components have become obsolete and should be replaced by newer Swing components.
- Swing API, a much more comprehensive set of graphics libraries that enhances the AWT, was introduced as part of Java Foundation Classes (JFC) after the release of JDK 1.1. JFC consists of Swing, Java2D, Accessibility, Internationalization, and Pluggable Look-and-Feel Support APIs. JFC was an add-on to JDK 1.1 but has been integrated into core Java since JDK 1.2.

For the development of this project both hardware and software were required. The hardware required is any machine compatible for running the softwares and resources required.

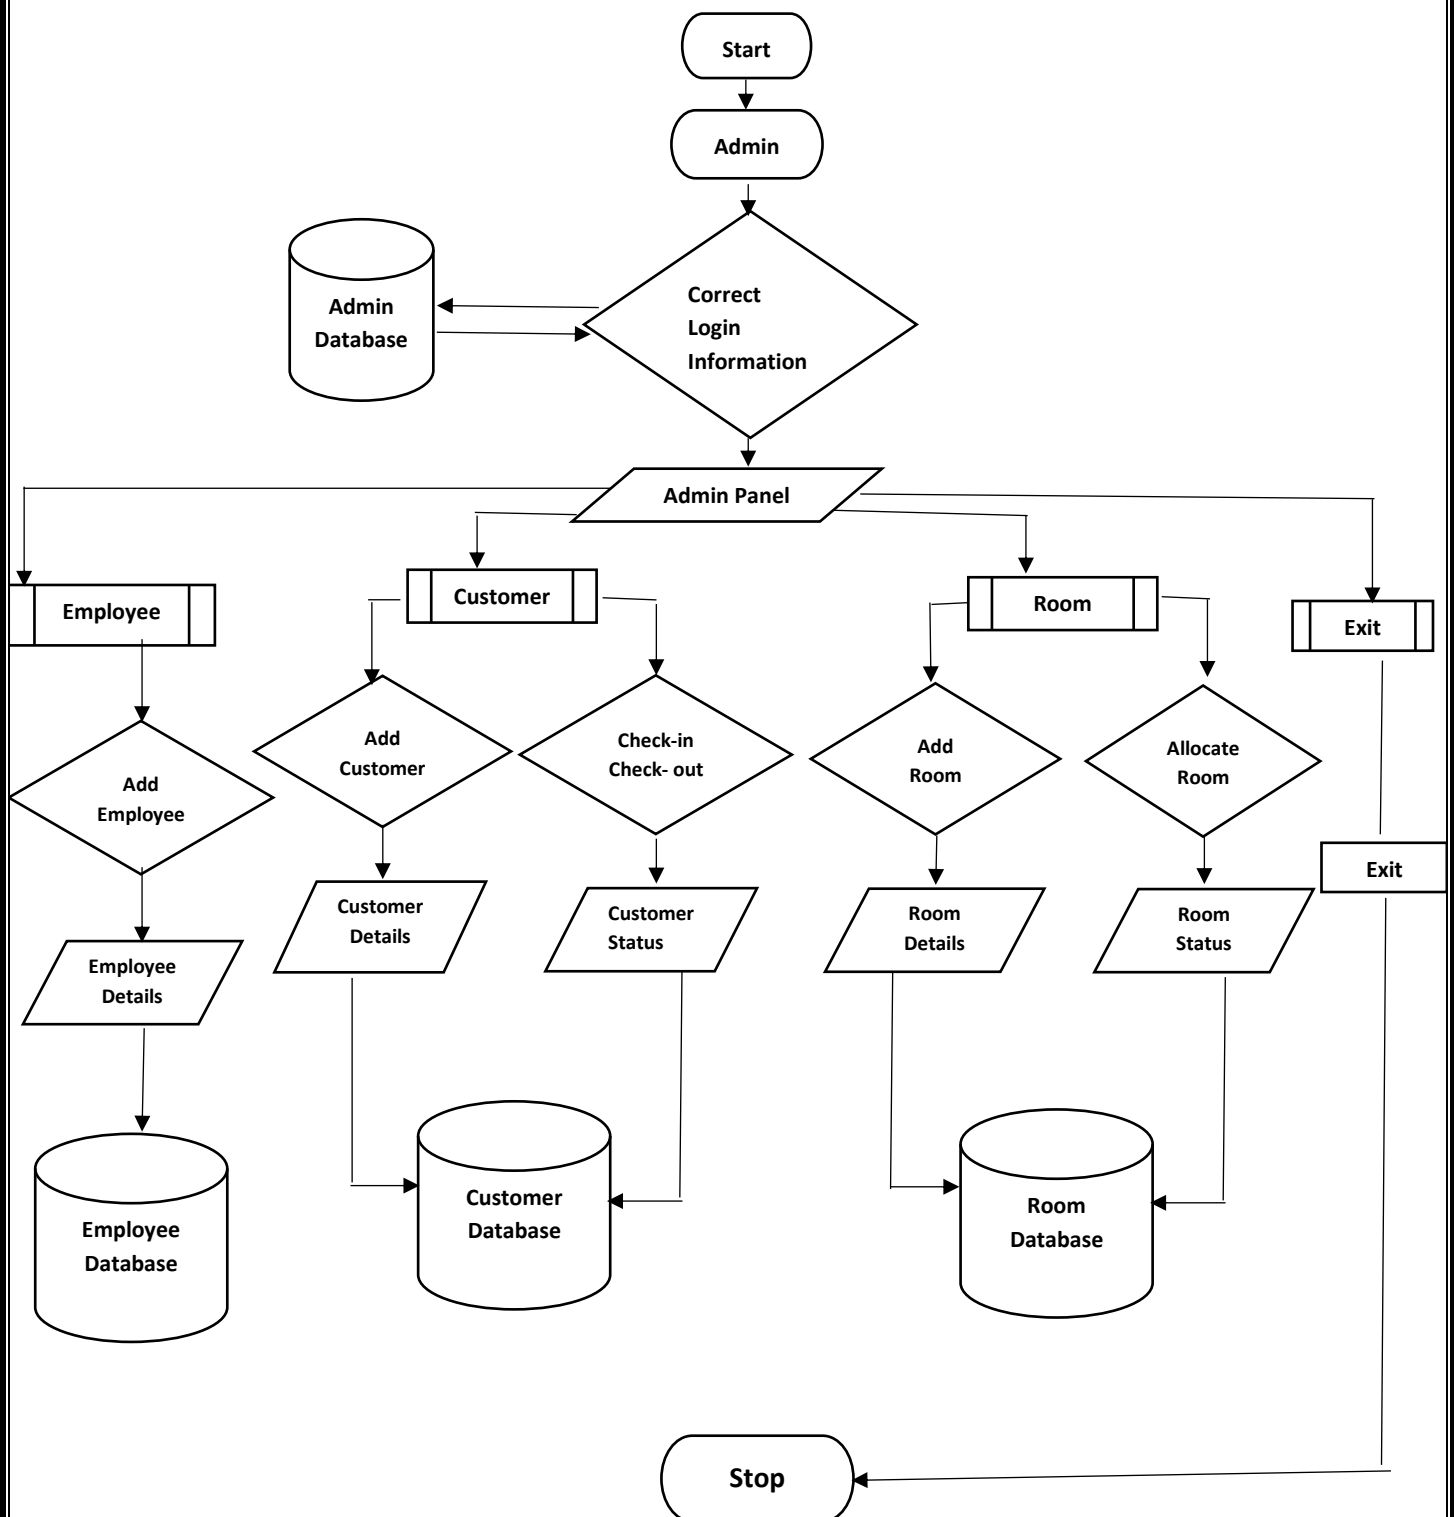

Software Requirements

- Operating System : Windows 11
- Front End : Java, NetBeans 18
- Back End : MySQL

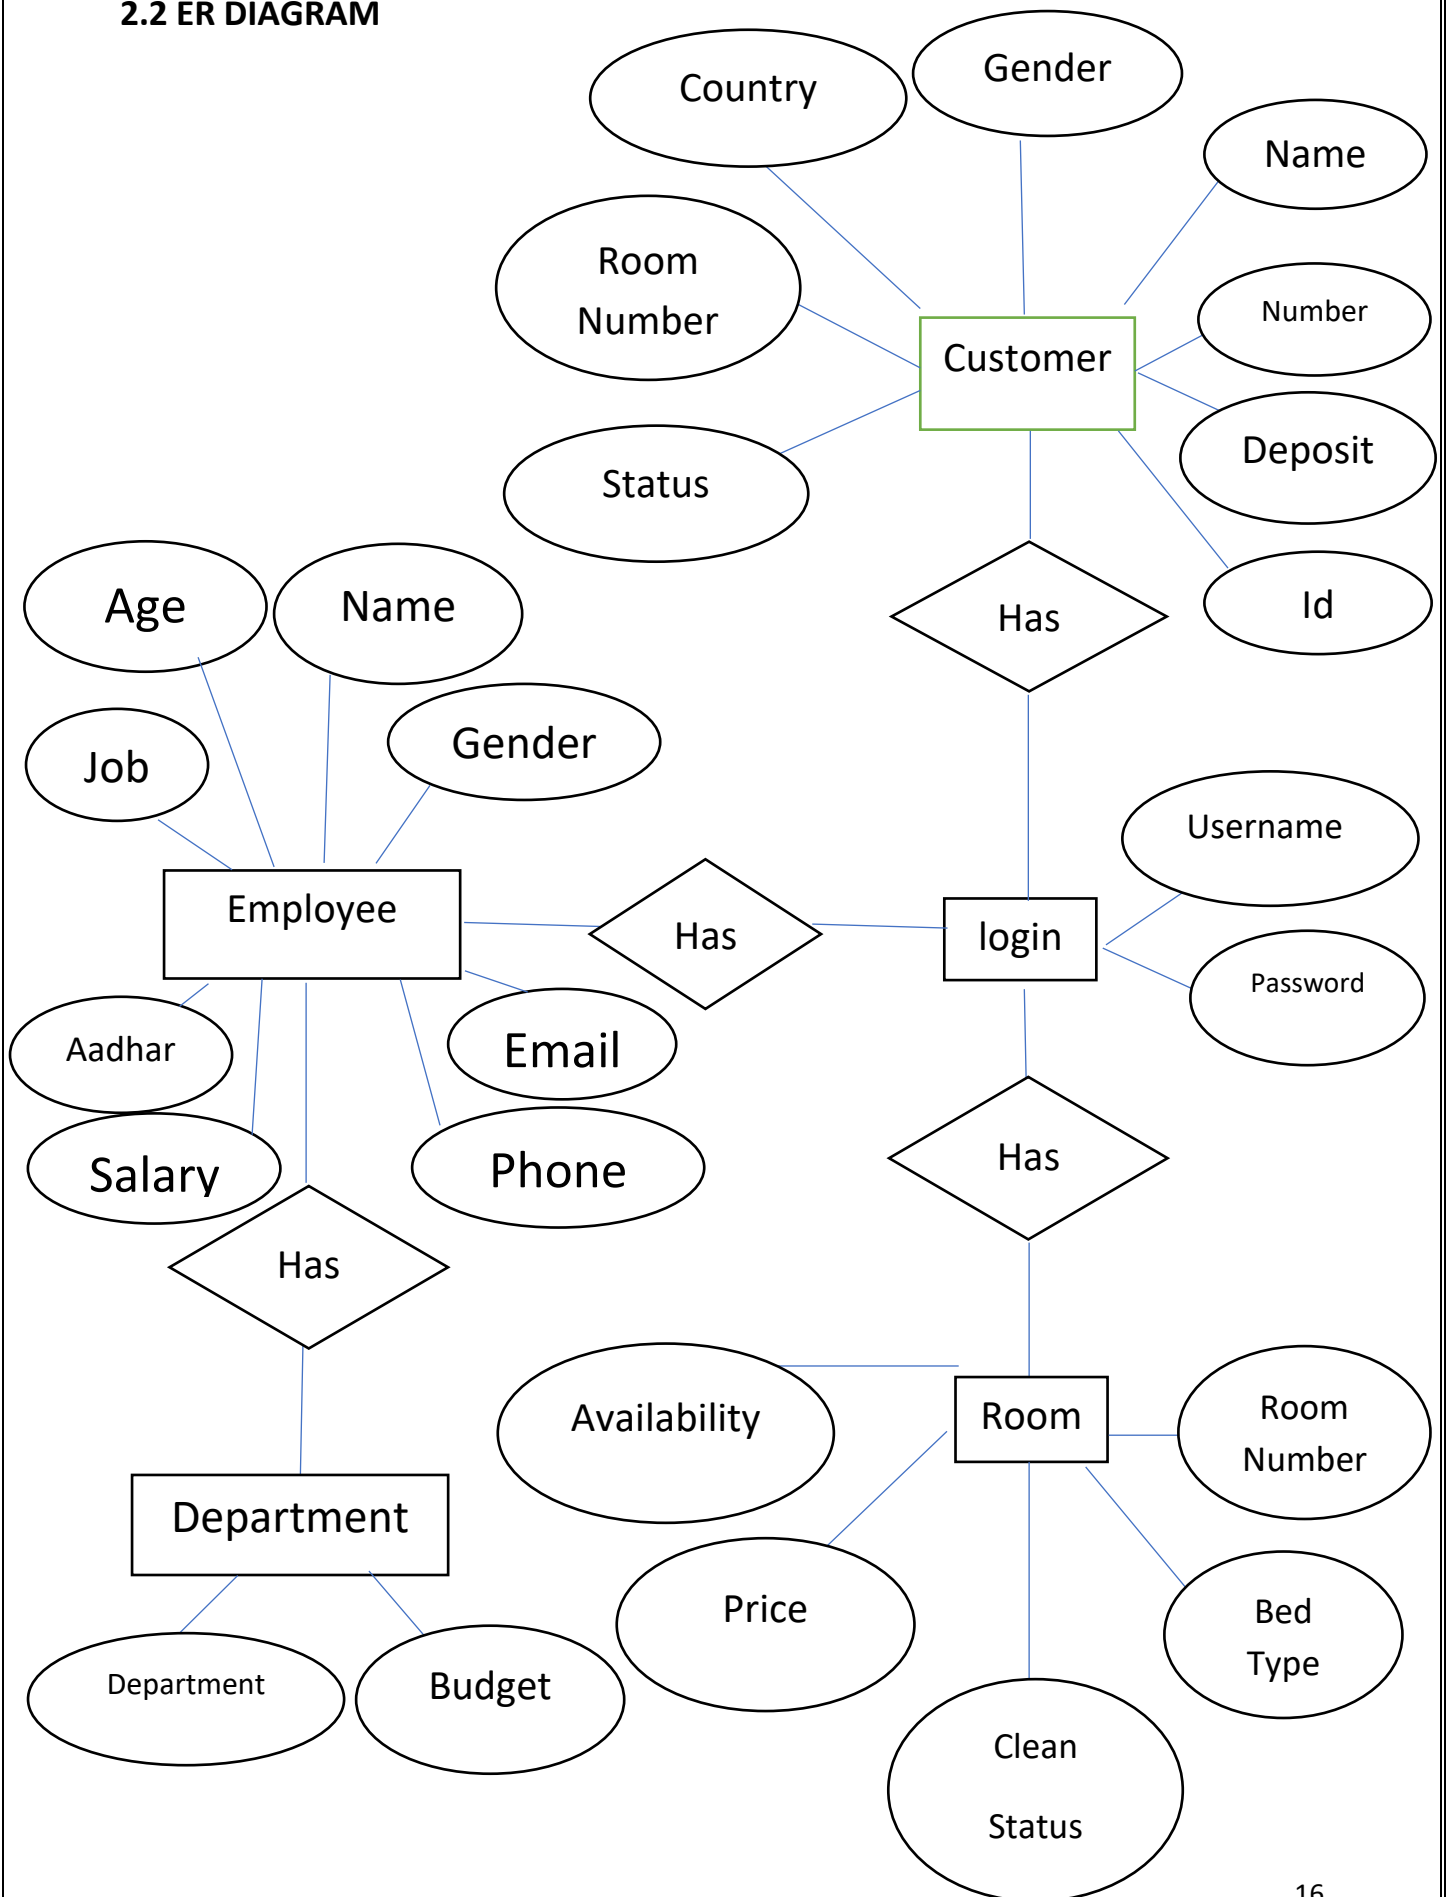

Hardware Requirements

- Desktop PC or a Laptop
- Printer
- Operating System – Windows 11
- 12th Gen Intel(R) Core(TM) i5-1235U 1.30 GHz
- 8.00 GB RAM
- 64-bit operating system, x64 based processor
- 1024 x 768 monitor resolution
- Keyboard and Mouse

4.DASHBOARD –

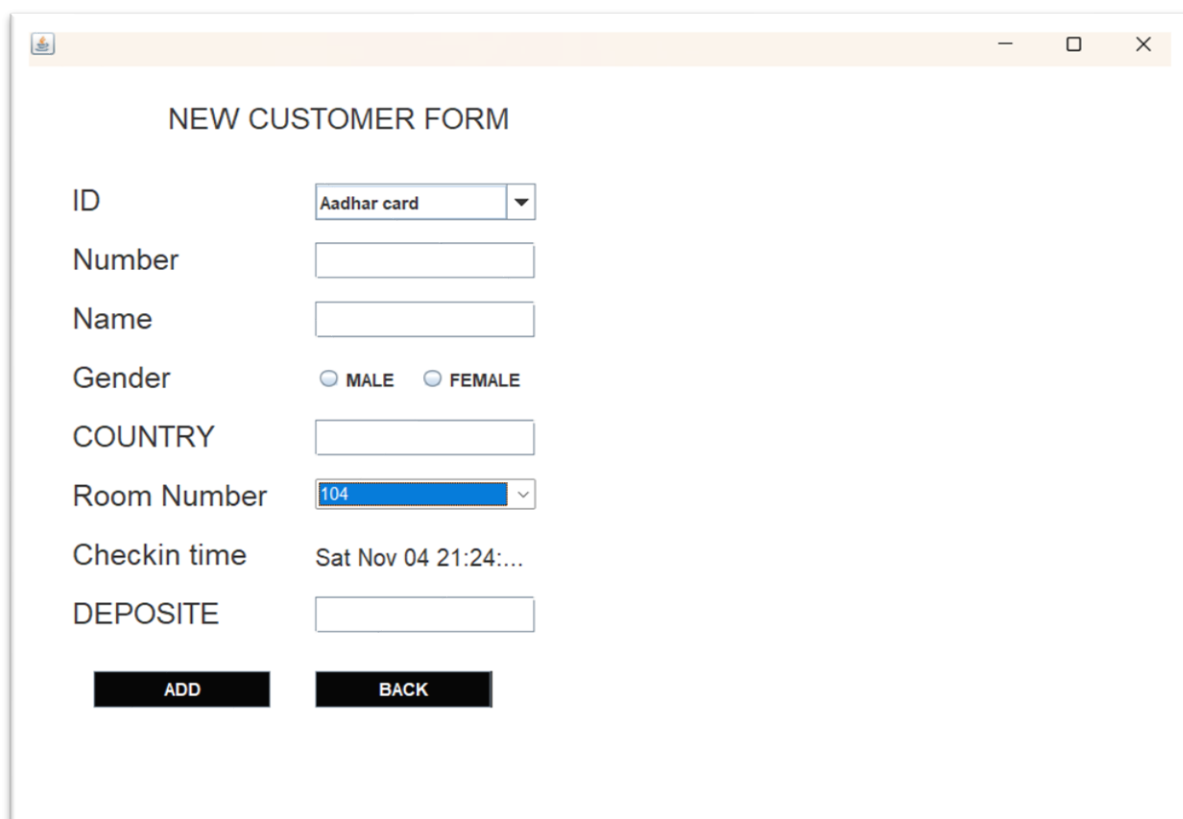

5.RECEPTION –

The screenshot shows a software window titled "HOTEL RECEPTION". On the left is a vertical sidebar with a list of menu items: "New Customer Form", "Rooms", "Department", "All Employee", "Customer Info", "Manager Info", "Checkout", "Update Status", "Update Room Status", "Search Room", and "Logout". The "New Customer Form" item is highlighted. The main area of the window displays a large, stylized image of a modern hotel lobby with the text "HOTEL RECEPTION" overlaid in a large, green, sans-serif font.

6.CUSTOMER FORM(ADD CUSTOMER) -

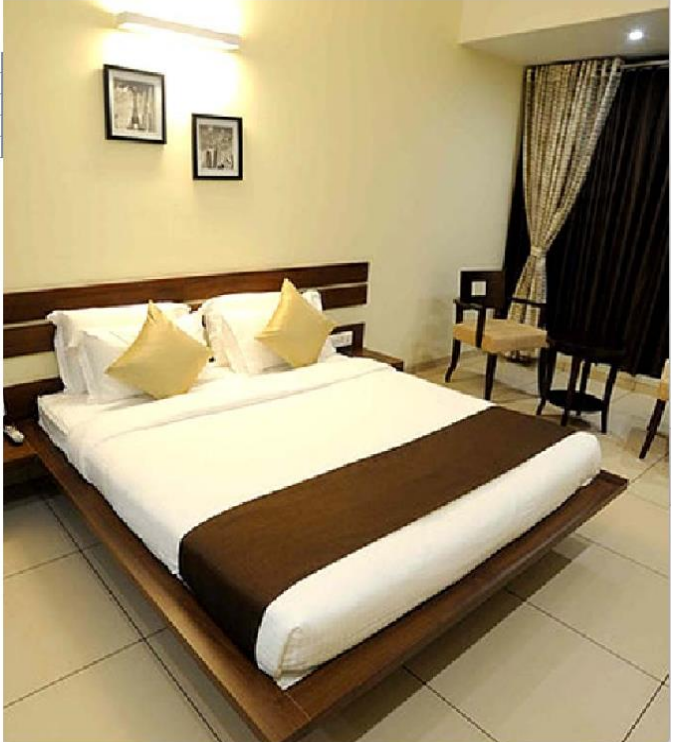

The screenshot shows a software window titled "NEW CUSTOMER FORM". It contains a form with the following fields and controls:

- ID**: A dropdown menu currently showing "Aadhar card".
- Number**: A text input field.
- Name**: A text input field.
- Gender**: Two radio buttons labeled "MALE" and "FEMALE".
- COUNTRY**: A text input field.
- Room Number**: A dropdown menu currently showing "104".
- Checkin time**: A text input field showing "Sat Nov 04 21:24:..."
- DEPOSITE**: A text input field.

At the bottom of the form are two buttons: "ADD" and "BACK".

5.Conclusion

In this project we have tried my best to make user friendly software. This software can be handled by any person who has little bit of idea of computers. In this software we have tried to meet most of the requirements of the present hotel management system including maintaining details of customers, rooms and employees . We also keep provision to update the details of customers, rooms and employees. In my effort we have tried to make my software all the more user friendly but there may some features which we would like to include in my continuous attempts.

6.Future Scope

1. Integrated Technology Solutions:

- The integration of various technologies such as artificial intelligence (AI), machine learning (ML), and the Internet of Things (IoT) will play a crucial role. AI can be used for personalized guest experiences, chatbots for customer service, and predictive analytics for demand forecasting.

2. Mobile Applications:

- Mobile apps will continue to be a focal point for hotel management. Guests are increasingly relying on mobile devices for bookings, check-ins, and accessing hotel services. Future systems might include features like mobile room keys, mobile check-out, and real-time communication with hotel staff.

3. Contactless Technology:

- The COVID-19 pandemic has accelerated the adoption of contactless technology in the hospitality industry. Future hotel management systems may further integrate touchless check-ins, keyless entry, and mobile payments to enhance the overall guest experience.

4. Blockchain Technology:

- Blockchain can enhance security and transparency in hotel transactions. It can be utilized for secure and tamper-proof recording of guest information, reservations, and financial transactions. This could

improve data integrity and build trust between guests and hotels.

5. Green and Sustainable Practices:

- With a growing emphasis on sustainability, hotel management systems may incorporate features to monitor and optimize energy consumption, waste management, and other eco-friendly practices. This aligns with the increasing demand for environmentally conscious travel.

6. Cybersecurity:

- As hotel management systems become more interconnected, ensuring robust cybersecurity measures will be critical. Protecting guest data, financial transactions, and the overall system from cyber threats will be a top priority.
